

NETRA

Network-Enhanced Transaction Risk Analysis

An offline workstation for financial-intelligence and cybercrime teams. No data leaves this machine.

Offline by design

Bitcoin traffic and chain data are fused on this host. Nothing is sent anywhere.

Explainable

Every score is the exact sum of the factors behind it.

Audited

Every view, decision and export is recorded with hashes.

What is a canary?

An address you control and plant on the public ledger. Anyone touching it is a trustworthy sample of live adversary behaviour.

Registry

Address	Purpose
bc1q...c01	dust bait
bc1q...c02	payout bait

Not a network honeypot. Canary data never leaves this machine; labels flow to Dispositions.

Canary feed

Nothing has touched your own addresses today, and that is normal.

Interactions

- Unlabelled only
- Direction ▼

Canary	Counterparty	Amount	Time	Label	
bc1q...c01	A-07 cluster	0.0004	02:11	Suspicious	Benign
bc1q...c02	unknown	0.012	01:40	Suspicious	Benign

2 unlabelled interactions wait for a decision.

What is a canary?

An address you control and plant on the public ledger. Anyone touching it is a trustworthy sample of live adversary behaviour.

Registry

Address	Purpose
bc1q...c01	dust bait
bc1q...c02	payout bait

Not a network honeypot. Canary data never leaves this machine; labels flow to Dispositions.

Dispositions

412 labels feed the model. Most are weak, so confirmed outcomes remain the yardstick.

Supervisor, Analyst

Offline · 0 external calls

Light

Dark

Disposition (weak)

348

Confirmed outcome (strong)

51

Imported label (external)

13

Labelled set

Group	Batch	Label	Source	Who
NTR-0412	3	closed_escalated	Strong	AS
NTR-0064	2	closed_false_positive	Medium	RK
NTR-0301	4	imported	Medium	import

Labels join features as of the decision batch, never today's.

Bias: analysts label what they were shown, the top of the queue. Dispositions alone would teach the queue, not the truth.

Export labels

Retrain now

Estimated 6 min. Creates a challenger, not a champion.
